Jetlog 24x7 PowerNapping Module

\$99.95

(Suggested retail price)

Challenged by fatigue when you just can't afford to be? The JETLOG 24x7 PowerNapping Module is the perfect solution for your tired mind—a Springboard™ module that provides Maximum Fatigue Recovery in Minimum Time™ anytime and anywhere you are in need for it!

Just snap in the Springboard module, repose your hand on the back of your Visor handheld and touch an onboard sensor. While you rest your head for a gentle nap, JETLOG® takes care of business by preventing the negative effects of napping to occur—waking you up before you are able to enter into a deep state of REM sleep. The PowerNapping Module follows proven and reliable napping strategies, which are recommended by NASA.

With JETLOG's patented and award-winning technology, you will enjoy properly timed Power Naps according to the most efficient sleep stages for highly beneficial fatigue recovery. Properly timing your naps to prevent deep sleep and dreaming not only relieves you from negative post nap effects such as grogginess, disorientation, sweating, or headaches, but also helps you avoid subsequent sleep loss, which would otherwise compromise your regular sleep.

The JETLOG 24x7 PowerNapping Module comes with an onboard touch sensor specifically designed to monitor your individual transition into deep sleep and dreaming via alterations of your muscle tension. Just touch the sensor with your thumb while your respective hand reposes on the screen-down Visor handheld. JETLOG initiates a wakeup call whenever you start diving into deep sleep or dreaming by detecting a significant drop of your sleep stage related muscle tension when your thumb slides off the sensor!

The 24x7 PowerNap software features state-of-the-art screen design which anticipates human factor considerations for total application control at a glance. Vital settings such as active alarms or timers, as well as generic information like Total Nap Time or local time, are clearly displayed on the main screen level. Enjoy extended
