 <p>Beng Yeow [Q]</p> <p>>> USER STATS</p> <p>eChief</p> <p>Posts: 1535</p> <p>Location: Singapore</p> <p>Local Time: 04:43 AM</p> <p>Current PDA: HP Jornada 928</p> <p>Status: Offline</p>	<p>PowerNap with Handspring Visor</p> <p>JETLOG Corporation today released the JETLOG 24x7 PowerNapping Springboard module for the Handspring Visor. The module induces properly timed naps to prevent deep sleep and dreaming which not only relieves negative post nap effects such as grogginess, disorientation, or headaches, but also avoids subsequent sleep loss, which would otherwise compromise regular sleep.</p> <p>"Managing tight time schedules has always been a core function of the handheld computer, and JETLOG's innovative approach will help busy, on-the-go people combat fatigue and maximize efficiency," said Rita Sharma, business development manager at Handspring.</p> <p>JETLOG utilizes a touch-sensor located on the 24x7 PowerNapping Springboard module specifically designed to monitor a person's transitions into critical sleep stages. It initiates wake-up calls whenever the person who touches the sensor starts diving into deep sleep or dreaming by detecting a significant drop of correlated muscle tension.</p> <p>"The JETLOG 24x7 PowerNapping Module went from concept stage to launch in less than four months," said Karim Daghbouche, President & CEO of JETLOG Corporation, "The Power Napping Module is win-win opportunity for both JETLOG and Handspring. The flexibility and open architecture of the Springboard platform allowed us to bring the module to market very quickly."</p> <p>The JETLOG Springboard module is certified for Visor, Visor Deluxe, Visor Neo, Visor Platinum, Visor Pro, and Visor Edge, and retails at US\$99. More details available at http://www.jetlog24x7.com</p> <p style="text-align: right;">Report this post to a moderator </p>

Boy, I sure agree with you, palmfreak!

I have to wonder how much of a market would actually exist for a device like this, and how effective it really is.

Speaking for myself, I don't have the opportunity to "nap" at work, although I sure feel like I could use one, especially right after lunch ☹

I will admit, though, that I avoid taking naps when at home, for exactly the reasons that are mentioned in this press release - I end up sleeping instead of napping, wake up groggier than I was before the nap, and then can't sleep that night. Maybe I need to investigate buying a Handspring unit so that I can take advantage of the advanced features of this Springboard!

I read the ad at Handspring. This is really amazing. It reminds me of one of those "built it in an evening" projects from a 1970's electronics magazine. The only thing the Visor is being used for is a "beeper" and "timer", both functions that could easily be built into a standalone device. And \$99? Just to say "I got one!"?

It will be interesting to see what else becomes available in Springboard. Matter of fact, I think I have some ideas for products I may develop:

1. UFO Repulsor
2. Blinking Light Baby Hypnotizer
3. Electric Shaver
4. Dark Detector
